PROFESSIONAL EXPERIENCE

Accenture Solutions Private Limited,Bangalore, India   **Oct '21 – Present**
Software Engineer Analyst
1st Year (As Automation Tester)
I was working with "Accenture freight logistics software" where we are providing service for Top ocean carrier in the world "AP Moller Maersk".
My job role is Test Automation Engineer, I develop and enhancing the testing process of product.
My roles include:

- I automate the testing process using the framework protractor. As of now I have created approximately 300 Test suites.
- I have worked as a Functional tester for many releases.
- I have created FRD's (Functional requirement documents or in common called as self-explanatory documents) for Automation process that I have Performed.
- I have handled various production Incidents that were reported by Clients.
- I have performed SIT (System integration testing) of the Maersk application within a given period of time.
- In release time I have performed sanity run and full module run for various modules of Maersk application

2nd Year (In Scrum Assembly team as QA Tester and in Business team as Assistant Business analyst)
I was working on a hospital/health-focused German government-based project called "Umlaut". This project followed Agile and Devops software development life cycle. Concurrently as I received a promotion, I fulfilled roles in both the Scrum team as an assembly tester and in the Business team as an assistant Business analyst.
My roles include: As Assembly tester

- Understanding the User story and writing High-level documentation for the test process.
- Analyzing all possible positive and negative scenarios and documenting them in test suite.
- Identifying and raising/reporting defects within the application .
- Logging bugs in scrum board for current sprint User story after test execution.

My roles include: As Business analyst
- Gathering requirements from product owner and stake holder .
- Act as a bridge between stakeholders, translating business needs to technical team.
- Analyzing and documenting Use cases, Business requirement documents (BRD), Functional requirement documents (FRD).
- Collecting feedback from post-implementation reviews and identifying areas of improvement for future sprints.

UNDERGRADUATE PROJECT	

Driver Drowsiness Detection

SJB Institute of Technology, Bangalore,India
- Designed and developed a system, based on embedded platform using Artificial Intelligence Algorithms. The main aim of this project is to detect driver drowsiness and to alert the driver by buzzer or phone call.
